TL31	80% of effluent samples comply with permit values {(Number of effluent samples that comply with permit values/Number of effluent samples tested)x100}	% of effluent samples compliant	Lab results from AL Abbot	80%	Stand-Alone	80%	84%	G2			80%	75%	O	[D298] Director: Engineering Services: • Ashton plant: failed to comply on NH3, COD and NO3 because the new plant was not in operation for some time all the surface Aerators were faulty. So all the flow was diverted to the old system which can handle less Hydraulic capacity, that force the operation to deviate from design specifications. CI2 is always failing since September 2018 simple because the service provide is sampling a wrong place, there is no oxidation reaction taking place because of less retention time. (December 2018)	[D298] Director: Engineering Services: • Bonnivale plant: failed to comply on E. coli because the out flow-meter is faulty therefore dosing flow rate is not directly proportional to the treated effluent. • Montagu plant: failed on NH3 & COD, there was a load shedding on the previous day the sapling was on the next day. • Robertson plant: The plant has 100days sludge age, its way beyond operation design specs. There was an order made for the statue in June 2018 so that the dewatering plant can operate, until today the order has not approved. There was a follow up now in January 2019 regarding that part and it's going to take 2-3month on the courier from Germany to Ashton. (December 2018)	80%	79.50%	O
